

Access terminal OUTDOOR

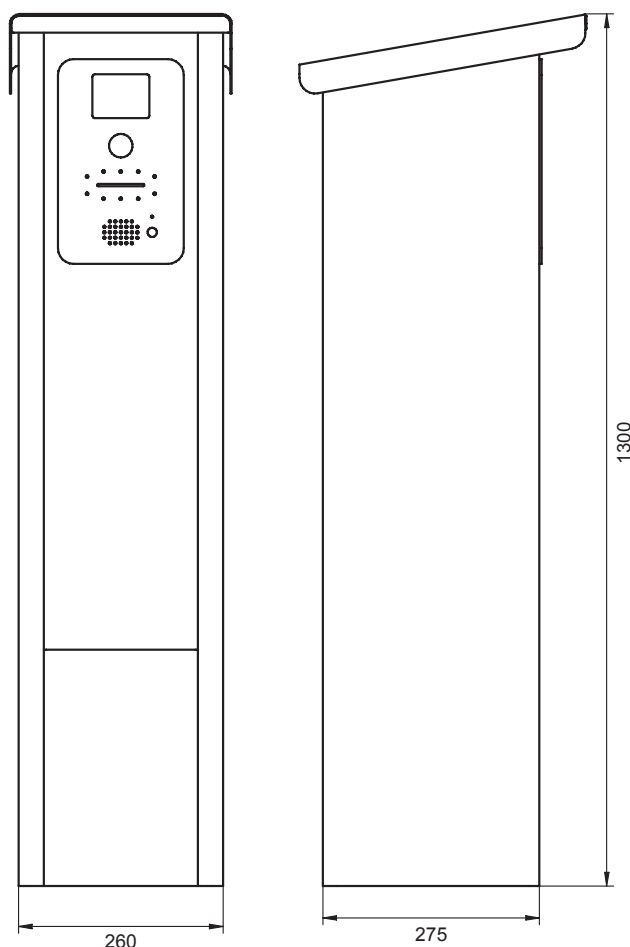

Access terminal OUTDOOR

DESCRIPTION

Fast handling and easy operation are the key requirements for entry terminals. Our elegant stainless steel access terminals support the idea of an intuitive guidance by focusing on the essentials: color graphic display and a single ticket slot for all tickets. The customer is guided by on-screen instructions and multicoloured LEDs on the button and around the ticket slot. In the case of additional questions or problems, the customer can contact a service center by pushing the integrated intercom button. The integrated hybrid motor reader is used both for in- and output of cost-effective barcode tickets. RFID cards (e.g. for robust season or special tickets) can be processed, too.

FEATURES

- Robust and weather resistant stainless steel housing
- Large backlit colour display for customer information
- Large illuminated button for special functions (e.g. group admission)
- Intuitive operation and fast ticket processing
- One ticket slot for in- and output of tickets
