

EMS-KIOSK

Cashless Indoorterminal

DESCRIPTION

This attractive terminal meets the ever-increasing customer demand for an easy, interactive checkout and cashless payment. The ergonomic design maximises ease of use and supports consistent, intuitive user interaction. In addition to the payment process, the large 32" display can be used for tariff and product information, operating visualisations or attractive advertising overlays.

By offering cashless payments only the procurement and handling costs for operators can be reduced to a minimum - refilling and emptying of cash money can be avoided.

Focus on the essentials: User interactions are possible with the large screen with multi-touch technology in combination with the universal QR-reader. After selecting the desired products, the shopping cart can be conveniently paid with credit cards or smartphone wallets. The QR- ticket is then issued and a receipt printed on request.

Phoenix Cloud is the central platform for configuration, evaluation, interaction and remote maintenance of Beckmann payment systems. Users benefit from intuitive dashboards where they can easily view the current status and interact with their system at any time, regardless of the device.

FEATURES

- 32" displayscreen (format 16:9, portrait)
- multi-touchscreen
- cashless payment cardterminal
- thermal printer for tickets, vouchers and receipts (Leporello)
- QR-scanner
