

Parking terminals

Ticketless entry and exit with Tap&Go

DESCRIPTION

This cashless parking solution eliminates paper tickets and the need of extra pay stations: Entry and exit barriers can be passed by presenting a credit card or a smartphone wallet. At the exit terminal, the time dependant costs can be paid directly with the same card or smartphone. In the case of additional questions or problems, the driver can contact a service center by pushing the integrated intercom button. Costs for hardware, operating and maintenance can be reduced to a minimum with this smart system.

OPERATION

At the entry terminal, smartphone wallets and NFC cards can simply be held in front of the display. Chip and magnetic stripes of credit cards can be processed, too. At the exit, the same card is presented again. The system calculates then the time dependant parking fee and initiates the payment process. A PIN can be entered easily on the touchscreen and the digital receipt can be retrieved via QR code.

FEATURES

- large 5" TFT color display with touchscreen
- cashless payment with credit cards and smartphones
- chip-, stripe and NFC-reader
- PIN entry possible via touch display
- digital receipt at the exit available
- convenient configuration, evaluation, interaction and remote maintenance via Phoenix Cloud
- dimensions (HxWxD): 1100 x 260 x 275 mm

OPTIONS

- integrated VOIP intercom unit
- height extension 400 mm, e.g. for trucks
