

Customer lot management **SERVERBOX**

Customer lot management SERVERBOX

LOTS FOR CUSTOMERS ONLY

Instead of a cash system EMS-4000, this lean and cost-effective server box can be used when extensive payment options are not required, e.g. for customer parking lots at shopping centers, offices and hotels.

For every barcode ticket, the entrance time is stored in the server box. Based on this, the resulting parking time can be calculated at the exit terminal. Possibly granted free parking times (e.g. by discounting the customers tickets at the supermarket checkout) are taken into account right away.

In addition to the time-dependant dynamic pricing, this parking system allows the use of RFID cards for a free barrier opening by residents and staff.

PAYMENT AT EXIT TERMINAL

Moreover, there is the option that foreign users without a validation or customers which exceeded the free parking time can pay directly at the exit terminal with coins or credit cards.

REMOTE MAINTENANCE & DATA AVAILABILITY

Based on an existing internet connection, tariffs and parameters can be set remotely via VPN access. Likewise, system messages (e.g. add paper tickets) can automatically be sent to ensure high system availability. Moreover, the remote maintenance (firmware updates and log file download) is possible, too.
